(57) **ABSTRACT**

A packet for tobacco products includes an inner container housing a group of tobacco products. A bottom wall is positioned at end portions of the tobacco products. An outer container houses the inner container slidably in parallel with axes of the tobacco products, thus allowing the inner container to slide between a retracted position, and an extracted or raised position. The bottom wall of the inner container forms a supporting portion abutting the end portion of one of the tobacco products. The top wall of the outer container includes an opening, and each sliding action of the inner
